APENDICE < 1 >

Para realizar la contrastación de los criterios clasificadores del FMI y el Banco Mundial de acuerdo con su capacidad explicativa de los procesos de crisis de deuda externa, se ha construido el cuadro nº 1 del Apéndice en el que se detallan los países que han renegociado en el periodo analizado 1960-1985 (2), y sus características en cuanto al nivel de ingreso, si son exportadores o importadores de petróleo, el tipo de prestamista principalmente utilizado (oficial, privado o mixto).

Asimismo, se detalla la pertenencia de cada país a la zona geográfica de acuerdo con la clasificación utilizada por el Banco Mundial.

El resultado de los datos descritos en la Tabla queda resumido del modo siguiente:

Nº de países que han renegociado la deuda: 45

Clasificación:

- En función del nivel de Ingreso - Estructura de Comercio

* Ingresos Bajos:	16
* Ingresos Medianos Importadores de Petróleo:	21
* Ingresos Medianos Exportadores de Petróleo:	8

(1) En el apéndice se han incluido todos los países que han renegociado aunque no se incluyan en el trabajo general por falta de datos. Es el caso de Kampuchea.

(2) A efectos de inclusión de países que han restructurado su deuda el periodo se amplía hasta 1985 por entender que los impagos que se producen posteriormente a 1983 tienen las mismas raíces que los que se producen en los años inmediatamente anteriores, y de esta forma se cubre mejor el número de países que han experimentado problemas de deuda.

- En función del tipo de Prestatario	
* Prestatarios Oficiales:	27
* Prestatarios del Mercado:	18
- En función del emplazamiento geográfico	
* Africa al Sur del Sahara:	21
* Norte de Africa y Medio Oriente:	2
* Este de Asia y Pacífico:	2
* Sur de Asia:	2
* Latinoamérica y el Caribe:	16
* Europa y Países Mediterráneos:	2

Fuente: Tabla adjunta al Apéndice.

De los resultados obtenidos deducimos que la mayoría de países que han impagado su deuda pertenecen a la categoría de ingresos medianos y son importadores de petróleo, si bien también un número considerable de ellos pertenece al grupo de ingresos bajos dependientes, asimismo, del petróleo.

Por el criterio de país prestatario, destacan los países que han tomado préstamos de tipo oficial, aunque no existe una diferencia muy grande en número con los prestatarios del mercado, no considerando que dicha diferencia sea significativa.

Donde sí existe una concentración importante de países que han reestructurado su deuda es en el emplazamiento geográfico, ya que 21 países pertenecen a la Zona de Africa al Sur del Sahara y 16 a Latinoamérica y Caribe.

Profundizando más en la interrelación entre las 3 variables para clarificar más el tipo de criterio a utilizar en la clasificación, hemos procedido a relacionar

los 3 criterios utilizados cada uno de ellos con los otros dos, siendo los resultados obtenidos los siguientes:

Nº de países: 45.

	<u>Africa al Sur del Sahara</u>	<u>Este Asiático y Pacífico</u>	<u>Latinoamérica y Caribe</u>	<u>Norte de Africa y Medio Oriente</u>	<u>Sur de Asia</u>	<u>Europa y Países Mediterrá.</u>
Ingresos Bajos	14					2
Ingresos Medianos						
Import. de Petróleo	5	1	12	1		2
Ingresos Medianos						
Export. de Petróleo	2	1	4	1		
TOTAL	21	2	16	2	2	2
Prestatarios del Mercado, 3		2	10	1		2
Prestatarios Oficiales, 18			6	1	2	
TOTAL	21	2	16	2	2	2
	<u>Ingresos Bajos</u>	<u>Ingresos Medianos Import. Petróleo</u>	<u>Ingresos Medianos Export. Petróleo</u>	<u>TOTAL</u>		
Prestatarios del Mercado		11	7	18		
Prestatarios Oficiales ..	16	10	1	27		
TOTAL	16	21	8	45		

Analizando las interrelaciones entre las variables obtenemos las siguientes conclusiones:

En Africa al Sur del Sáhara se concentran los países de bajos ingresos y los prestatarios oficiales. 14 de los 15 países de bajos ingresos están en esta área geográfica y se concentran un 65% de los prestatarios oficiales.

En Latinoamérica y el Caribe se sitúan aproximadamente la mitad de los países de medianos ingresos importadores de petróleo y un 57% de los países de ingresos medianos exportadores de petróleo. Asimismo, de los 18 países prestatarios del mercado, 10 pertenecen a Latinoamérica y el Caribe. Otra conclusión que se deduce de la comparación

de las cifras anteriores es que ningún país de ingresos bajos ha recibido préstamos del mercado, los cuales se han dirigido a los países de ingresos medianos, tanto importadores como exportadores de petróleo. Por el contrario, los préstamos oficiales han ido dirigidos tanto a los países de bajos ingresos como a los países importadores de petróleo de ingresos medianos, pero no a los que exportan petróleo.

Centrándonos en el razonamiento anterior, parece que los dos criterios más comunes en los países que han reestructurado la deuda son tanto de naturaleza del ingreso: ingresos bajos y países de ingresos medianos importadores de petróleo, y su emplazamiento geográfico: Africa al Sur del Sáhara y Latinoamérica y el Caribe.

A su vez se da una concentración de los países de distinta estructura de ingreso en cada una de las zonas geográficas: los países de bajos ingresos se concentran en Africa al Sur del Sahara y en Latinoamérica y el Caribe, los otros dos tipos de países de ingresos medianos (importadores de petróleo y exportadores de petróleo).

Observando, pues, tanto la concentración geográfica como la del ingreso, utilizaremos el criterio de clasificación utilizado por el Banco Mundial que recoge ambas características.

La clasificación de los países según su renta per cápita y su característica de importador o exportador de petróleo se detallan en el Anexo nº 1 del Capítulo IV en el Tomo II.

(1) A partir de 1979, las cifras totales para Iran no coinciden con los subtotales, y en concreto para la deuda privada. Al no poder asignar estas diferencias a ninguna partida concreta, no se ha calculado el % de deuda de Instituciones Privadas a partir de dicho año.

(2) Las cifras incluyen estimaciones de la deuda de Taiwan, pero no hay desglose por estos conceptos. Por ello, los porcentajes se han calculado asignando las diferencias a acreedores oficiales.

DISTRIBUCION PORCENTUAL DE LA DEUDA PUBLICA
EXTERNA CONTRATADA POR TIPO DE FUENTE DE
FINANCIACION UTILIZADA Y DE LA DEUDA PRIVADA SOBRE
LA DEUDA TOTAL DESEMBOLSADA

FUENTE: Cálculos efectuados con los datos del Anexo n° 3 de este capítulo.

Nota: Los porcentajes de las partidas Acreedores Oficiales (Bilaterales, Multilaterales) y Acreedores Privados (Proveedores, Instituciones Financieras y otros) corresponden a la deuda externa pública contratada. La deuda privada desembolsada se calcula como porcentaje de la deuda total (pública más privada desembolsada).
Al no coincidir las bases de cálculo, los porcentajes quedan distorsionados cuando el país tiene un elevado porcentaje de deuda privada en el conjunto de la deuda externa total. Las partidas deuda pública externa y total deuda externa desembolsada están expresadas en millones de dólares.

 (*) Y nos indica el promedio ponderado de las condiciones de los créditos obtenidos en euromercado s/LIBOR, recogiendo tanto los volúmenes emitidos como los plazos de las operaciones de crédito. Para 1980 no hay datos comparativos.

El margen promedio ponderado se calcula de la siguiente forma:

$$\frac{\text{I volumen} \times \text{margen} \times \text{vencimiento}}{\text{I volumen} \times \text{vencimiento}}$$
